

Investing in our energy future.

For more than 115 years ExxonMobil has worked to meet Australia's growing demand for energy, fuelling the economic growth of the nation.

Natural gas has an increasingly important role to play.

When used to generate electricity, gas can reduce CO₂ emissions by up to 60 percent compared to coal.

ExxonMobil is investing more than \$10 billion in natural gas projects in Australia, providing energy to continue to power our economy - and help meet our commitment to a cleaner energy future.
